About Project

Objective: The main objective of this project is to design, publish, and share a simple yet effective Power BI report that provides insights into store performance and sales analysis. The report aims to enable stakeholders to make informed decisions by visually interpreting sales trends, store metrics, and performance indicators.

Overview: Power BI is a powerful business analytics tool developed by Microsoft, used to analyze, visualize, and share data insights. This project focuses on creating a report that can be easily shared and collaborated upon within teams and organizations, leveraging the publishing and sharing features of Power BI.

Data Source: The data used for this report relates to the sales and performance metrics of various stores. Typical fields may include sales revenue, number of transactions, product categories, store locations, time periods, and performance targets.

Collaborative Tools: Power BI allows various sharing methods for collaboration:

- **Share via Link:** Users can generate a shareable link with viewing permissions.
- **Publish to Web:** This feature allows the report to be embedded in websites, making it publicly accessible if desired.
- **Email Sharing:** The report can be directly shared with users via email.
